

Abstract

*A method and circuit arrangement for*

✓ The method relates to the transmission of messages in which a number of L components ( $m_0, \dots, m_{L-1}$ ) are coded by means of orthogonal functions to a signal ( $s(t)$ ), and in which approximations of hermitic functions are used as orthogonal functions.

~~*RP*  
*A7* The invention further relates to the circuit layout in order to carry out said method.~~
